

Legacy quick-start alias

Use the current validated paper-trade runbooks instead.

This PDF is only a legacy convenience alias. It is not the current quick-start, not a model-deployment guide, and not a separately validated evidence surface.

Do not quote model-performance targets, ML deployment claims, live prediction guidance, bankroll guidance, ROI, promotion readiness, live profitability, or real-money claims from this alias.

CURRENT TRUST PATH

- `PAPER_TRADE_USAGE.md` for the current operator runbook.
- `DAILY_ARTIFACT_GUIDE.md` for which current artifact or validator to open first.
- `VALIDATION_QUICKSTART.md` for the validation route after edits.
- `Superfecta_Project_Report_2026-04-15.html` as the dated validated shareable report trust anchor.
- `Superfecta_Project_Report_2026-04-15.pdf` as the derivative dated report export.

EVIDENCE BOUNDARY

Paper-trade posture can change only from ROI-complete settled paper observations with usable result, return, cost, and timestamp coverage plus the existing settlement-quality checks. A clean scanner run, stale quick-start PDF, validator pass, historical replay, model-fit diagnostic, or open paper signal is not live profitability or real-money evidence.

BAQ must not be treated as BEL.
